

KEY FEATURES

1. HIGHLY CONDUCTIVE

Built on a solid stone base, Heatwood maximizes warmth in your living space. Its ultralow 0.066 R-value makes it **160% more thermally conductive** than conventional 15mm engineered flooring—so your home heats up faster and stays cozy.

2. DURABILITY TESTED

It goes through rigorous and holistic testing. The product has excellent wearing, is remarkably resistant to wear with have determined that the product is up to 10 times more durable than other leading flooring systems.

3. SUSTAINABLE

Environmentally sourced hardwood immersed in waste during the manufacturing process. Over 75% of the raw hardwood comes from renewable resources and re-use 100% wood from traditional solid flooring manufacture.

4. ACOUSTICALLY INSULATED

The unique High-Density Board Composition in the laying process reduces impact and ambient sound noise. The tongue and groove adhesive assembly is capable of up to acoustic subfloor matching and can therefore be used for acoustic subfloor and lower impact sound insulating by the humidity of the installation environment.

5. TEMPERATURE TOLERANT

The composite base allows it to be used in both hot and cold climates, as well as areas that have a tolerance to heat. The composite base has similar thermal conductivity to conventional or concrete. **Maximum heat tolerance is 66 celcius!**

6. EASY TO INSTALL

Simply remove the fine fabric and placed on a board. (One-Step Adhesive). The board can be cut easily using conventional tools and has glue our adhesive at the back and on aisle a simple roll or brush to apply.

7. GLOBAL INNOVATION

Designed with global conditions in mind, our flooring has been tested in extreme conditions from the Arid-zone with up to humidity of tropical North Australia.

8. ARCHITECTURAL INFLUENCE

The colour and design options have been developed in consultation with leading architects globally. We understand the importance of getting the right result.

- HIGHLY CONDUCTIVE
- ACOUSTICALLY INSULATED
- DURABILITY TESTED
- TEMPERATURE TOLERANT
- A GLOBAL INNOVATION
- ARCHITECTURALLY INFLUENCED

INTELLIGENT BY DESIGN AND CLEVER TO THE CORE.

DESIGNED TO BE BOTH HIGHLY FUNCTIONAL
AND AESTHETICALLY SUPERIOR FOR LONGER

Manufactured from more
environmentally aware disciplines,
Heatwood flooring celebrates the beauty
of wood, while achieving a unique balance
between natural appearance and
superior functionality in a
wider range of environments.

2 SOLID TIMBER TOP LAYER >
2MM OF PREMIUM WOOD.
AVAILABLE IN VARIOUS
COLOUR FINISHES.

3 PATENTED TECHNOLOGY >
UNIQUE PATENTED CORE MADE FROM
A COMPOSITE OF RECYCLED WOOD
PULP AND STONE.

1 FINISHING
SUPER HARD WEARING
AND SCRATCH RESISTANT.
11 COATS OF UV DIAMOND
TECHNOLOGY FINISH.

4 PROFILE
4 SIDED TONGUE &
GROOVE PROFILE
OFFERING FLEXIBILITY
WITH PATTERNS
AND STYLES.

5 SOUND REDUCTION
INBUILT ACOUSTIC AND MOISTURE
BARRIER WITHIN THE ONE-STEP
ADHESIVE APPLICATION.

SUSTAINABLE BY DESIGN

Designed for performance.
Respectful of the planet.
